

Temporary Construction Site Lighting

molex[®]

Ideal for temporary site lighting, Woodhead stringlights and high-bay lights provide safe, economical illumination for construction sites.

Features and Benefits

The 5030 stringlight utilizes 14/2 SJTW cord, with molded NEMA 1-15 plug and guards unassembled

Provides the most economical option in a UL listed stringlight

The 302SRL series stringlights all offer Lamp-It-In-The-Box™ packaging with guards preassembled to the string

Allows the user to easily install the lamps before arriving on the worksite

The 302SRL series stringlights utilize 12/2 TC cable rated to 600V; the 302SRLCA-F includes a feed-through Watertite® NEMA 1-15 connector

12 gauge wire allows for higher wattage per string; feed-through allows for multiple strings to be powered from a single outlet, especially when utilizing CFL or LED lamps

High bay fixtures include a 400W metal halide lamp and 3' of 18/3 SJTW cord with molded NEMA 5-15 plug

Fixture comes with everything needed to put it into service immediately

The 8575-MH-PS includes pulse start technology

Pulse start fixtures are required by law in the U.S.

All stringlights are in cartons with point-of-sale artwork

Makes them attractive to display in distributor showrooms
